Since the publication of the first edition of Human Behavior in the Social Environment, several generations of students have successfully used this classic text, which takes a social systems approach to human behavior. This systems approach is still widely accepted in the human services disciplines, including social work, education, nursing, psychology, and in human services programs themselves. Its ideas have become the organizing framework for curriculum, as well as fruitful sources for new applications of theory and practice. Among the advantages of the social systems approach is that it permits students and practitioners to see connections between fields of practice, between methods, and across professional disciplines and bodies of theory. The book serves as a template of the concentric circles of human behavior, with chapters on fields of behavior, beginning with the person and ranging outward to culture and society. Abundant examples from practice and from behavioral patterns are drawn from the social sciences, topical events, literature, and the authors' personal and professional experiences. This volume responds to the needs of students and instructors as these have developed since the publication of the previous edition. Published to coincide with the Fourth United Nations Environmental Assembly, UN Environment's sixth Global Environment Outlook calls on decision makers to take bold and urgent action to address pressing environmental issues in order to protect the planet and human health. By bringing together hundreds of scientists, peer reviewers and collaborating institutions and partners, the GEO reports build on sound scientific knowledge to provide governments, local authorities, businesses and individual citizens with the information needed to guide societies to a truly sustainable world by 2050. GEO-6 outlines the current state of the environment, illustrates possible future environmental trends and analyses the effectiveness of policies. This flagship report shows how governments can put us on the path to a truly sustainable future - emphasising that urgent and inclusive action is needed to achieve a healthy planet with healthy people. This title is also available as Open Access on Cambridge Core. "With this volume, we aim to meet the needs of instructors who favor a more succinct and afford-able book. This book provides a complete overview of motivation and emotion. Well-grounded in the history of the field, the fourth edition of Motivation: Biological, Psychological, and Environmental combines classic studies with current research. The text provides an overarching organizational scheme of how motivation (the inducement of action, feelings, and thought) leads to behavior from physiological, psychological, and environmental sources. The material draws on topics that are familiar to students while maintaining a conversational tone to sustain student interest. Dimensions of Human Behavior: Person and Environment presents a current and comprehensive examination of human behavior using a multidimensional framework. Author Elizabeth D. Hutchison explores the biological dimension and the social factors that affect human development and behavior, encouraging readers to connect their own personal experiences with social trends in order to recognize the unity of person and environment. The expanded fifth edition of Environmental Hazards provides a balanced overview of all the major rapid-onset events that threaten people and what they value in the twenty-first century. It integrates cutting-edge material from the physical and social sciences to demonstrate how natural and human systems interact to place communities of all sizes, and at all stages of economic development, at risk. It also shows how the existing losses to life and property can be reduced. Part I of this established textbook defines basic concepts of hazard, risk, vulnerability and disaster. Critical attention is given to the evolution of theory, to the scale of disaster impact and to the various strategies that have been developed to minimise the impact of damaging events. Part II employs a consistent chapter structure to explain how individual hazards, such as earthquakes, severe storms, floods and droughts, plus biophysical and technological processes, create distinctive patterns of loss throughout the world. The ways in which different societies make a positive response to these threats are placed in the context of ongoing global change. In this extensively revised edition: An entirely new and innovative chapter explains how modern-day complexity contributes to the generation of hazard and risk Additional material supplies fresh perspectives on landslides, biophysical hazards and the increasingly important role of global-scale processes The increased use of boxed sections allows a greater focus on significant generic issues and offers more opportunity to examine a carefully selected range of up-to-date case studies Each chapter now concludes with an annotated list of key resources, including further reading and relevant websites.
