information and
tools to improve
their technology
and their world.
The core belief that
Popular Science
and our readers
share: The future is
going to be better,
and science and
technology are the
driving forces that
will help make it
better.
Archaeological
investigations were
conducted at the
Bug Hill site
(34Pu-116) as part
of the Phase II
mitigation program
at Clayton Lake in
southeast
Oklahoma for the
Tulsa District, U.S.
Army Corps of
Engineers under
Contract Number
DACW56-78-
C-0212. The site

will be inundated upon completion of the lake in the Jackfork Valley. The Bug Hill site is one of two large, dark midden mounds discovered during 1979 in the project area. Currently, these sites represent the southernmost distribution of dark midden mounds in eastern Oklahoma. Very similar sites occur along Fourche Maline Creek in Latimer and LeFlore counties. Investigations at the Bug Hill site consisted of the manual excavation of 13 2 m x 2 m, four 1 m x 1 m squares, and mechanical excavation of three backhoe trenches. Preservation of cultural deposits in

the center of the site was extremely good, even though rodent disturbance and other natural processes affected their distribution in some cases. On the average, these deposits had a depth of 170-180 cm. Toward the edges of the accretional mound, the deposits became shallower and preservation was poor. Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. The

authorized, paginated WTO Dispute Settlement Reports in English: cases for 2009. Provides information on a variety of products, discussing background, history, raw materials, design, and the manufacturing process Issues for include section: Bituminous roads and streets. Almost anything you could possibly want to know about any word or technique in construction. Hundreds of up-to-date terms, materials, drawings and pictures with detailed descriptions. Throughout human history, wars and violence have often been waged in the name of

religions and in the name of diverging religious beliefs and belonging.

Ironically, though, all religions in their teachings speak of nonviolence and have in common the promotion of peace and justice, namely the respect of human life and dignity, the institution of human rights, the protection of the poor and vulnerable, the freeing of the oppressed, the active elimination of injustice? It seems therefore, that violence and wars would be

antithetical to religions; yet they are so frequently used as their justification. Are we then speaking of different "religions"? "Institutional religions," the ones structured by humans and that are brandished to lead violence and wars, become in fact quite foreign to the essence of the religions as they were established by their founders and that they intend to represent; they actually contribute to their destruction. Wanting to reflect on that point, I embarked, a

few years ago, on giving voice to local religious individuals, whom I called "Religious Peacemakers," and who, each by living the essential teachings of their particular faith, contributed by their actions to peace and justice. I wanted to prove that their path, irrespective of their original religion, would be similar, and that their diverse faith, instead of separating them, would on the contrary end up uniting them.
