This Volume of the AIDA Europe Research Series on Insurance Law and Regulation explores the key trends in InsurTech and the potential legal and regulatory issues that accompany them. There is a proliferation of ideas and concepts within InsurTech that will fundamentally change the market in the next few years. These innovations have the potential to change the way the insurance industry works and alter the relationships between customers and insurers, resulting in insurance products that are more closely aligned to individual preferences and priced more appropriately to the risk. Increasing use of technology in the insurance sector is having both a disruptive and transformative impact on areas including product development, distribution, modelling, underwriting and claims and administration practice. The result is a new industry, known as InsurTech. But while the insurance market looks to technology for greater efficiency, regulators are beginning to raise concerns about managing potential risks. The first part of the book examines technological innovations relevant for insurance, such as FinTech, InsurTech, Sharing Economy, and the Internet of Things. The second part then gathers contributions on insurance contract law in a digitalized world, while the third part focuses on cyber insurance and robots. Last but not least, the fourth part of the book discusses legal and ethical questions regarding autonomous vehicles and transportation, including the shipping industry, as well as their impact on the insurance sector and civil liability. Written by legal scholars and practitioners, the book offers international, comparative and European perspectives. The Chapters "FinTech, InsurTech and the Regulators" by Viktoria Chatzara, "Smart Contracts in Insurance. A Law and Futurology Perspective" by Angelo Borselli and "Room for Compulsory Product Liability Insurance in the European Union for Smart Robots?" by Aysegul Bugra are available open access under a CC BY 4.0 license at link.springer.com. All three open access chapters were funded by BIPAR. The Academy is a prestigious international institution for the study and teaching of Public and Private International Law and related subjects. The work of the Hague Academy receives the support and recognition of the UN. Its purpose is to encourage a thorough and impartial examination of the problems arising from international relations in the field of law. The courses deal with the theoretical and practical aspects of the subject, including legislation and case law. All courses at the Academy are, in principle, published in the language in which they were delivered in the "Collected Courses of the Hague Academy of International Law". In less than ten years touchscreen smartphones and their apps have created an unprecedented technological revolution. Yet they are rife with serious potential for breaches of privacy and security, and a lack of uniform rules makes navigation of the legal landscape extremely difficult. Addressing this unstable regulatory environment, this concise, practical guide for the first time provides a measure of legal certainty. It examines case law and legislation in Europe and the United States to highlight the rights and obligations of all actors involved in the marketing of mobile apps, bring to light essential principles and recommend some viable solutions. Nine experts, all versed in the latest developments in international and national laws and regulations affecting digital mobile technology, examine such key topics as the following: contract law as applied to the sale and use of smartphone apps; intellectual property rights in mobile apps; protection of users; data protection; European Union (EU) medical device legislation and its safety implications for app users; fitness or wellness apps; apps'

collection of personal data; apps as hostile code and malware delivery mechanisms; competition law issues; taxation of mobile apps; liability issues for app developers and distributors; and implications of the EU's new regulatory framework on online platforms. Because it is difficult for a basic user to understand how vulnerable everyday apps can be, and because every new information technology platform delivers new risks along with its benefits, legal practitioners working in a wide variety of fields will be increasingly called upon to engage with both personal and enterprise security and privacy breach cases arising from the use of mobile apps. This deeply informed practical analysis goes a long way toward ensuring appropriate handling of legal issues which arise in the mobile app context. Every practitioner, government official and software developer will welcome this much-needed volume. Adopting a multi-disciplinary and comparative approach, this book focuses on emerging and innovative attempts to tackle privacy and legal issues in cloud computing, such as personal data privacy, security and intellectual property protection. Leading i AIDS researchers are investigating new vaccines that would prevent infection with HIV and reduce the spread of AIDS. The background paper provides an overview of ethical issues that arise in the conduct of HIV vaccine trials. Rev. versions of papers originally presented at a conference held on Jan. 6-7, 1996 in Cambridge, U.K. Southeast Asia is sub-region of Asia that consists of 11 countries that spread out from the eastern China to India and are so rich in religion, culture, and history diversities. Ten of the 11 countries are members of the Association of Southeast Asian Nations (ASEAN). In terms of economy, most of them are within the World Bank classification of lower-middle income economies. Although classified as the lower-middle income economies, Southeast Asian countries have been praised as

having buoyant economies, healthy investment, and growing trade ties. These economic potentials are in conjunction with the dynamic political sphere in the Southeast Asian countries. Recent increasing confrontation between China and the U.S. have also created the geopolitical uncertainty which threatens the economic growth in the region. All these economic and political events in the region are closely related to international law since they are dealt with legal entities beyond their own jurisdiction. This book would discuss various contemporary issues of international law that occurred in or related to countries located in the Southeast Asian region. There are 9 articles in this book. The articles would exhibit the relationship of international law and national law. The book is a short introduction to comparative law and economics, a growing field in the interaction between law, economics and comparative political science. It is a guide to economists, lawyers and political scientists looking for a brief overview. It includes both strands of the traditional literature, namely the role of legal families and microeconomic analysis of legal rules in a comparative perspective. The study of courts at the global level is complemented by comparative judicial politics. This book consists of edited versions of the papers delivered at the Institute of International Shipping and Trade Law's 12th International Colloquium at Swansea Law School in September 2016. Featuring a team of contributors at the top of their profession, both in practice and academia, these papers have been carefully coordinated so as to ensure to give the reader a first class insight into the issues surrounding charterparties. The book is set out in three parts. -Part I offers a detailed and critical analysis of issues of contemporary importance concerning time charters. -Part 2 carries out a similar analysis with regard to voyage charterparties. -Part 3 deliberates issues common to both type of charterparties. Offering critical analysis of contemporary legal issues on charterparty contracts, this book considers recent legal and practical developments and is therefore essential reading for both professional and academic readers with an interest in charterparties. Enabling information interoperability, fostering legal knowledge usability and reuse, enhancing legal information search, in short, formalizing the complexity of legal knowledge to enhance legal knowledge management are challenging tasks, for which different solutions and lines of research have been proposed. During the last decade, research and applications based on the use of legal ontologies as a technique to represent legal knowledge has raised a very interesting debate about their capacity and limitations to represent conceptual structures in the legal domain. Making conceptual legal knowledge explicit would support the development of a web of legal knowledge, improve communication, create trust and enable and support open data, e-government and e-democracy activities. Moreover, this explicit knowledge is also relevant to the formalization of software agents and the shaping of virtual institutions and multi-agent systems or environments. This book explores the use of ontologism in legal knowledge representation for semantically-enhanced legal knowledge systems or web-based applications. In it, current methodologies, tools and languages used for ontology development are revised, and the book includes an exhaustive revision of existing ontologies in the legal domain. The development of the Ontology of Professional Judicial Knowledge (OPJK) is presented as a case study.

The authors in this book provide a critical analysis of almost two thousand judgments and decisions from twenty-nine national and international jurisdictions. The breadth of the decisions is vast, from the resettlement of evictees to the regulation of private medical plans to the development of state programs to address poverty and illiteracy. frameworks for bioenergy. Faced with high petroleum and natural gas prices, and increasingly aware of climate change and environmental concerns, many countries are implementing national policies and legislation to encourage bioenergy production and use. These developments stem from the desire to achieve energy security and self-sufficiency, the need to reduce reliance on foreign fossil fuel reserves and the hope of providing increased trade opportunities for some agricultural commodities. Land use, and the competing needs of energy and food security are key issues in the bioenergy debate. International and national regulatory frameworks will have to establish clear guidelines for the sustainable development of the bioenergy industry. This paper aims to stimulate discussion on the elements of appropriate national legal frameworks for bioenergy, particularly in developing countries. It provides legislators and policy-makers with a tool to assist in identifying areas of law which may affect bioenergy regulation, and in designing key elements of national bioenergy laws. This book explores the role of HRD professionals in ethical and legal decision making in the workplace. While previous books have described the need for ethics in HRD, this book presents ways that HRD scholars and professionals can influence, through collaborative relationships, effective implementation of ethical policies and legal standards in the workplace. The ethical policies of an organization provide a key insight into its values, and this book shows the relationship between those values and HRD practices, such as training and development, career development, and organization development. Exploring such topics as protected classes, diversity intelligence, employee rights, and employee privacy, this book will inform HRD scholars and professionals on researching and enhancing ethical and legal decision making in the workplace. It is a matter of fact that technological innovation is deeply impacting on our culture, society, economy and labour market. The massive and widespread use of Artificial Intelligence and the strengthening of the collaborative economy (also known as 'gig' or 'platform' economy) are blurring the traditional legal categories and creating new requirements for protection for employed and self-employed workers. This book represents a tool to understand where we are and where we are going, focusing on old and new legal categories and labour market policies. The chapters included in this volume cover different disciplines, such as legal informatics, labour law, social security law, civil law, and tort law, in order to offer scholars and legal specialists an overall view of ongoing changes, challenges and opportunities from a European Union law perspective. The Fourth Industrial Revolution has the potential to raise global income levels and improve the quality of life for populations around the world. Technology development of AI, self-driving, big data, the Internet of things, and many digital revolutions have changed how people interact with each other. Therefore, developing a comprehensive and globally shared view of how technology is affecting our lives and reshaping our social, cultural, and human environments is essential. There has never been a time of more significant promise, or one of greater potential peril. Today's decision-makers, however, are too often trapped in traditional, linear thinking, or too absorbed by the multiple crises demanding their attention, to think strategically about the forces of disruption and innovation shaping our future. The main goal of the conference was to provide an outlet for papers discussing the importance and impact of industrial revolution 4.0 to influence social aspect in human life. The proceedings consist of papers covering issues on psychology, law,

communication studies, culture, religion, and literature. The proceedings will provide the latest research and constitute a concise but timely medium for the dissemination. The Proceedings of the 1st International Conference on Social Sciences Series (SOSCIS 2019) will be invaluable to professionals and academics in psychology, law, communication studies, culture, religion, and literature.
